

The Future is Modular – with MOBA's New Control Panel MCP

The MOBA Mobile Automation AG has set a new standard in the industry by taking the next step in the automation of aerial work platforms and mobile cranes: the brand new modular control panel (MCP). Thanks to innovative, flexible combinations of different components of choice, the machine manufacturer individually creates his or her own controller. The basic model's equipment with all safety features as well as the compatibility of all modules thereby significantly reduce development times of the control panel.

Limburg, March 15, 2016

Highlights, such as the high resolution color display or the unique possibility to time efficiently install software updates via a USB stick, make the console a sophisticated high-end device. Thanks to the modular concept, even hardware upgrades are applicable at all times. By this means, the panel always remains at the cutting edge of technology and adaptable to all requirements, like a chameleon. Countless variations of joysticks, buttons and displays allow an extraordinary variety of functionality.

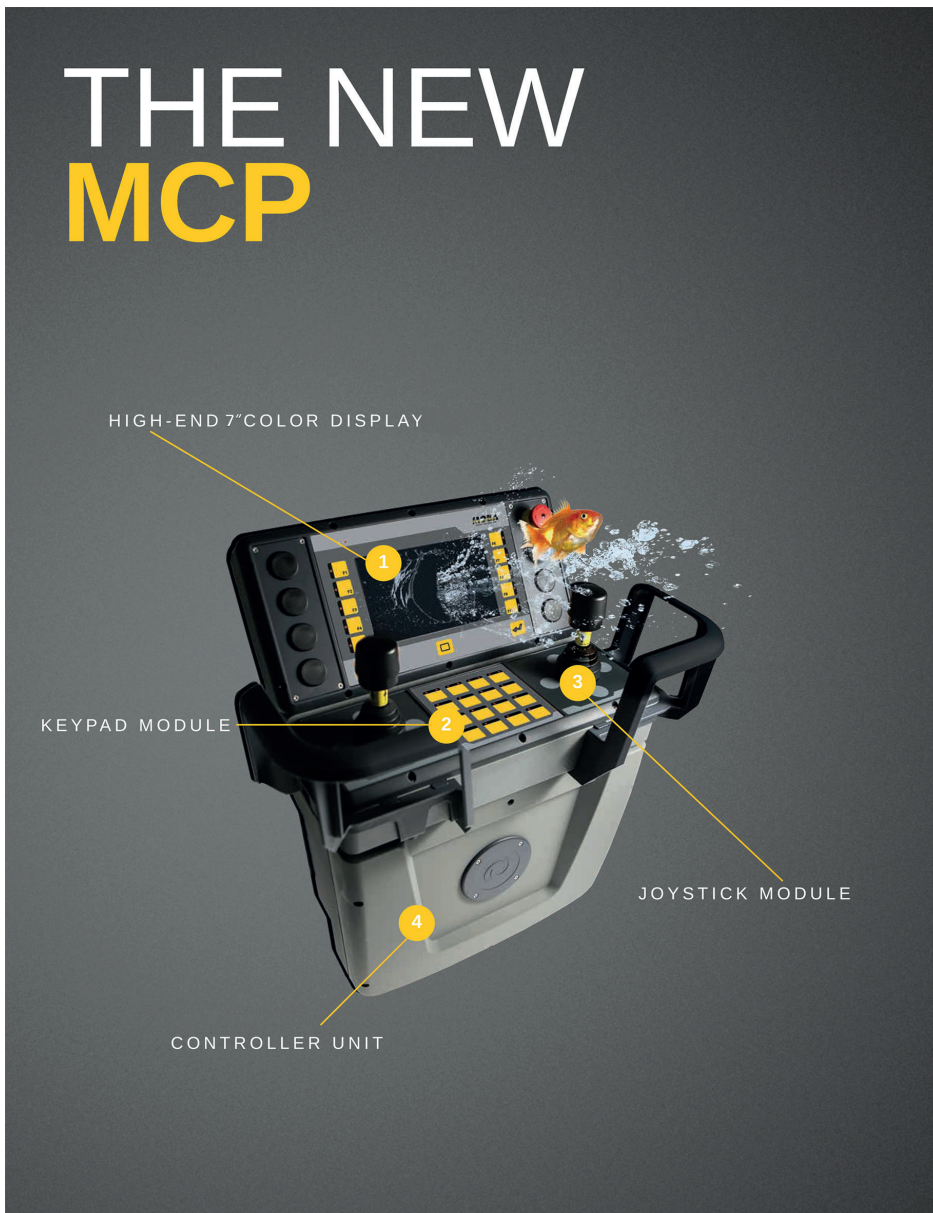

Thanks to highly resistant components, its strengths particularly emerge in harsh construction environments. Sophisticated technologies, such as the ultralight backbone or the practical and space-saving specially by MOBA developed telescopic cover protect the controller ideal against external influences such as wind, water, sun and snow.

With the extension of the proven operating unit HMI_{mc} into a modular control panel MCP, MOBA has succeeded in providing another future-oriented concept with numerous possibilities. Significant time and cost savings thanks to flexibility, optimized usability and modularity are key elements for a quick amortization.

The MOBA Mobile Automation AG is a global player in the mobile automation. With more than 40 years of experience, it provides automation technology for various industries and supports projects with all-round solutions: conception, development, product launch and reliable premium service at all times. High standards with exceptional individuality and flexibility of all solutions are the focus of MOBA's work.
